GAME MODEL AND PHILOSOPHY

Watch Video Game Model 

"I believe that football is a complex game of duels and spaces; in other words, it is a game of action versus physical, technical, tactical and, above all, cognitive opposition, through the manipulation of space, the ball, time, and the opponent to gain ground and benefit from being or finding the free man in the quest for the goal—and, consequently, to prevent it.

Therefore, to condition all game behaviors, training periodization must not violate the logic of the game."

THE ATHLETE AT THE CENTER

The Player as the Center of the Process.
The athlete's development and decision-making guide all our actions.

OPERATIONAL PILLARS

Organization: Tactical structure and clarity of roles in all phases of the game.
Teamwork: Collective synergy where the "we" prevails over the "I".

THE EMOTIONAL FACTOR

Passion: The emotional fuel that drives competitiveness and commitment in every training session and match.

DYNAMICS AND INTENSITY

Relative Maximum Intensity: Requirement for maximum effort adapted to the match context and individual capacities.
Creativity: Freedom for improvisation and talent within the tactical organization.
